EDUCATION

Arizona State University — M.S. Software Engineering — Aug 2024 – May 2026 | Tempe, AZ
Coursework: Data Structures & Algorithms, Distributed Systems, Operating Systems, Parallel Computing, Machine Learning

Anna University — B.E. Computer & Communication Engineering — Graduated 2024 | Chennai, India

PROFESSIONAL EXPERIENCE

FOUNDING SOFTWARE ENGINEER | Morozko Forge, LLC (cold-plunge manufacturer) — Oct 2025 – Present | Phoenix, AZ
Full-time co-op on CPT, Oct 2025 – May 2026; full-time employee since May 2026

- Architected and built the company's full-stack customer platform from the ground up (web, Android/iOS and cloud backend in React, TypeScript, Node.js, SQL), letting customers control ice baths by phone; it helped drive new sales.
- Replaced a third-party vendor's cloud with the company's own messaging server on Oracle Cloud, so the company controls how its connected products communicate.
- Built fault-tolerant automation that keeps customers' baths running through server and network outages, with monitoring that flags silent failures.
- Built API integrations with the company's online store and an external partner, passing the partner's integration review.
- Built the procurement system operations uses daily, replacing spreadsheets, and Python ETL jobs that cut manual reporting by about 40%.
- Set up CI/CD with GitHub Actions and automated tests; work in Agile/Scrum sprints.

SOFTWARE DEVELOPER INTERN (CAPSTONE) | MyEdMaster — Jan 2026 – May 2026 | Tempe, AZ

- Built an AI tutoring web app in Python, Django and MySQL with a team of six, delivering 17 features in one semester through Agile/Scrum sprints and code reviews; demoed progress to the MyEdMaster sponsor.
- Built the app's AI answer pipeline using retrieval-augmented generation (RAG) and OpenAI, returning personalized answers in under two seconds.

RESEARCH ASSISTANT (PART-TIME) | Arizona State University — Apr 2025 – May 2026 | Tempe, AZ

- Built automated Python data pipelines with Apache Airflow that clean and load research datasets for ASU's School of Sustainable Engineering, replacing manual data preparation.

DATA SCIENCE INTERN | Sify Technologies — Sep 2023 – Dec 2023 | Tamil Nadu, India

- Built ETL pipelines that loaded operational data into Google BigQuery, and wrote the SQL queries behind Tableau and Power BI reports for the business team.

PROJECTS

WFM Integration Hub | *TypeScript, Node.js, Docker, Kubernetes (GKE), GitHub Actions*

- Built an integration service that syncs approved timecards from a workforce management API to payroll, with field mapping, automatic retries and a dead-letter queue, so every approved hour is paid exactly once.
- Secured it with signed webhooks and Google Secret Manager, and packaged it for Kubernetes (GKE) with health checks and a CI/CD pipeline.

ResumeForge MCP (open source) | *TypeScript, Node.js, Docker, GitHub Actions*

- Built an open-source tool that lets AI assistants like Claude and ChatGPT tailor resumes to job postings, with automated tests and a CI/CD pipeline that publishes releases to Docker and npm.
- Designed it as a multi-step workflow with a consistent match score and a check that flags unsupported claims.

Real-Time Distributed Monitoring Platform | *Python, Apache Kafka, PostgreSQL, Redis, React, Docker*

- Built event-driven Python microservices that process live production data from Apache Kafka into PostgreSQL and stream it to a React dashboard, containerized with Docker.
- Scaled throughput by adding Kafka consumers, with Redis holding shared state across services.

TECHNICAL SKILLS

Languages: Python, TypeScript, JavaScript, SQL, HTML/CSS
Frontend & Backend: React, Node.js, Express, FastAPI, Django, REST APIs, API integrations
Data: PostgreSQL, MySQL, Microsoft SQL Server, Redis, Google BigQuery, Apache Airflow, ETL pipelines
Cloud & DevOps: Google Cloud, Oracle Cloud, Linux, Docker, Kubernetes (GKE), Git, GitHub Actions, CI/CD
Practices: Agile/Scrum, code review, automated testing, AI-assisted development
